SPACE – To Infinity & Beyond*

Two Wednesday Classes: October 4 & 11
Both classes in the Student Cinema 1 - 3 PM

* Famous catchphrase of Buzz Lightyear in the Toy Story films

Session 1:  Life, The Universe, and Everything  October 4th

This class will update us on what astronomy and other sciences have discovered and theorized about the possibility of life on other worlds, in our own solar system and beyond. We’ll learn how scientists theorize life’s start on Earth, how these theories might apply to other known planets or their moons, and all the many factors involved in planetary and stellar development and their influences on life.

Session 2:  Rockets, Space Travel, and Space Warps  October 11th

It seems like countries big and small are getting into rocketry these days. Private corporations are flourishing by developing new systems in a field once considered the province of just a few. We'll hear about the history of "Rocket Science" and examine new space travel developments, including a guess about what might happen far into the future. Special attention will focus on what it takes to put humans in space for short or long journeys, and how relativistic effects theorized by Albert Einstein make the passage of time a very complicated affair.

Questions or information:  Call Mary Ann Cassani  815-409-1807

To Infinity & Beyond:  □ Members $10  □ Guests $20  Register by September 22, 2017

Name_______________________________________________________________________________ Check #________

Phone_____________________________ Email_______________________________________________

Emergency contact name & phone ______________________________________________________

Deliver cash registration to the ALL office in Tallent Hall. Checks payable to UW Parkside/ALL; deliver or mail to Vanessa. Credit card registration for members must be submitted online; an email with a member registration LINK will be sent around the 1st Monday each month. NO online credit card registrations can be accepted for guests. As registrations fill, members get preference signing up.
Our Presenter: Patrick Frendreis

Patrick Frendreis worked for 12 years with the Chicago City Colleges (Harry S. Truman College) as tutor and Assistant Manager of Truman's Academic Tutoring program.

He then spent two years at the Museum of Science and Industry in Chicago as the Public Performance Specialist, writing and developing science demonstrations.

For the last 25+ years Patrick has concurrently worked at the Adler Planetarium in Chicago as the Planetarium Theater Technician, maintaining and installing planetarium theater equipment, programming visuals and writing scripts for the live constellation shows, as well as serving as a part-time Professor of Astronomy at William Rainey Harper College in Palatine, IL.

(Photo left) Patrick Frendreis lecturing on astronomy at the Kenosha Public Museum.

In a 2015 article about Frendreis in the Kenosha News, he revealed that as a kid, every month in Boy’s Life, the Boy Scout magazine, they had an article about different constellations, and I got interested in that. I'd go to the library and pick up some books, plus I had a grandmother who was just into spoiling all of her grandchildren, and she kept buying me telescopes. I still have at least one of the telescopes that she bought me when I was in high school. And she would take me out to places like the Yerkes Observatory in Williams Bay.

Frendreis shared more of his thoughts: The universe is just so big and vast, and there are things out there that are not like things here on Earth, although things here on Earth are to some extent part of the universe. It never ceases to amaze me. Also, as a teacher of astronomy, just when we think we know everything and we're saying, "This is the way it is," then someone else comes along and says, "Well, let's change that" model or particular theory. And, as with anything, it's just this never-ending, cool thing to be looking at—the universe. How can you beat the universe?
