Instructure Canvas Pilot Project
Spring 2013
Final Report

Lorna Wong
Director, Learning Technology Development
Office of Learning & Information Technology (OLIT)

July 30, 2013

This report was prepared with the assistance of all the Canvas pilot participants – faculty, students, campus leads, Learn@UW & DoIT technical experts, and Canvas implementation team.

Executive Summary

Introduction
During the Spring 2013 semester, the Office of UWS Learning Technology Development conducted a pilot project on the Instructure Canvas Learning Management System. This study was sponsored by the Learn@UW Executive Committee, based on a recommendation on the LMS Task Force 2011 report.

Instructure Canvas is a relatively new product in the LMS marketplace, but has some notable positive features that have drawn attention from institutions seeking replacement of Learning Management Systems in the past 18 months.

The main goals of the pilot is to gain a better understanding of the functionality of this new LMS, to examine specific features to that may improve student engagement and to observe the effort it takes for faculty and students to adopt a new LMS.

Participation was solicited through a short RFP process in Fall 2012 to the Learning Technology Centers (or equivalent units) on the campuses. 7 campuses with 11 faculty and 13 courses of various disciplines were selected which included over 300 students.

This report provides details on the project and the findings from feedback by students, faculty, and campus support staff.

Key Findings
The key findings include: the system is easy to use; the user interface is simple, modern, and easily adaptable; performance through the hosted service is reliable; some new features are very well liked. Migration of courses is challenging depending on complexity. Integration with 3rd parties is easy via LTI standards. The general attitude among users is positive but not overwhelmingly excited. Over 80% users would like to use the system again. Most feel that continuing use will allow them to uncover and use the features more creatively. SIS integration will need much deeper investigation.

General Recommendations from the pilot participants include:
• Expand on the breadth and depth of use in 2013-14 for better assessment
• Conduct a survey to faculty on future instructional needs in regards to LMS
• Explore other LMS options for better comparison with Canvas and D2L
• Conduct a ‘shoot-out’ event with faculty to test a number of LMSs side-by-side

Depending on the decision of the Learn@UW Exec Committee in regards to the next step in keeping current with the Learning Management System evolution, pursuing any of the above actions will be valuable to gain insights on the LMS needs in UWS.
Canvas Pilot Project Final Report

Background

What is the pilot project
The University of Wisconsin System has standardized on a single Learning Management System (LMS) – Desire2Learn (D2L) since 2003. D2L has become the key technology to deliver digital resources and to provide interaction for all modes of online course delivery. While the growth on adoption has been steady, and the system maintains a stable environment for majority of our academic community, UWS needs to stay informed in this rapidly changing space that is critical to teaching and learning. The Learn@UW Executive Committee has endorsed a pilot project to investigate how new products compare to our current system. Based on the recommendation of the LMS Exploratory Task Force (2011 & 2012), the first system selected was Instructure/Canvas, a relatively new LMS system that has gained significant attention in the higher education market the past two years.

Scope of the pilot
The main goal of the Canvas pilot is to understand the functionality provided by this LMS that may not be available in the current LMS system. Specifically, we want to examine features that can help impact student learning and overall satisfaction of the technology. The pilot also examines the resources necessary to support the technology and its users in a hosted environment.

The overall plan was to invite a small group of interested faculty and teaching staff to design and deliver a course using Canvas for the spring semester 2013.

While an in-depth investigation is not possible within the short duration of the project, we hoped to gain a preliminary understanding on how the system will support the authentication and SIS integration needs for an enterprise of the size and complexity like UWS.

Pilot Project and Timeline

Project Participation
The pilot was conducted within a rather aggressive timeline because of the constraints of the funding availability within a fiscal year (FY13) and the academic calendar. [Appendix 1]

An agreement with Canvas was negotiated for the Spring 2013 semester that includes license, training, implementation & hosting for 400 users. The cost reflected a 25% discount the vendor honored for Internet 2 members.

1 UWS LMS Task Force Report: http://www.uwsa.edu/olit/learnuw/LMSTaskForce
2 The Student Survey instrument and more detailed results are available to the Learn@UW Exec
A Learn@UW subcommittee (comprised of Bob Hoar, Tanya Joosten, Lorna Wong) drafted an RFP [Appendix 3] to the campus Learning Technology units (LTC) to recommend and to support a faculty to participate. The goal was to assemble a small combination of courses that represents multiple disciplines, course levels, size of class, and instructors with various experiences in LMS and related tools. Seven campuses with a total of eleven faculty and thirteen courses were selected. Over 300 students were engaged in the pilot. [See Appendix 2 for participating faculty and courses.]

**Pilot Support**

The project required an overall administrator, a role initially assumed by UW-Green Bay (Leif Nelson) but changed over to UW-Stout (Sali Mounce) in March. The campus pilot leads (LTC units) provide support to the faculty and students and they explored the functionality of the system as LMS experts. Training for administrators and faculty users was provided by Canvas in November.

The Canvas implementation team and the UWS team (Lorna Wong & Sali Mounce) held a weekly status-check meeting. The campus pilot leads also met weekly to exchange information and resolution of common problems. Pilot faculty met via web conference sessions and use discussion boards on the UWS Canvas site to share experience and findings.

We engaged Dr. Josh Morrill, research specialist at Academic Technology, DoIT, to assist with the evaluation of the pilot. He designed the survey instruments and monitored the process to collect feedback from both students and faculty in an orderly fashion before the Final Exam week.

Expertise from the DoIT/UWS IAM Support Team was coordinated by Dan Voeks, program manager at Learn@UW to assess Canvas’ capability to leverage SAML2 for authentication. A test environment set up with the help of Ryan Larscheidt at DoIT Middleware. We were able to test the compatibility of Canvas with the UWS Federated Authentication System across the campuses.

A consultation session with the Nevada System of Higher of Education (consists of 5 institutions, including 3 community colleges) was arranged by Canvas to get a glimpse of a Peoplesoft SIS integration with Canvas. Diane Landry, integration lead at Learn@UW assisted in the discussion.
Timeline of the Pilot

| August 2012 | Canvas Pilot was endorsed by the Learn@UW Exec Committee Sub-committee (Tanya Joosten, Bob Hoar, Lorna Wong) was formed |
| September - October | Sub-committee drafted a Request for Proposal (RFP) Pilot agreement was negotiated with the vendor for Spring 2013 |
| October | RFP for proposals was distributed to the LTDC Responses were reviewed Courses/faculty selected & notified – Initially 10 faculty from 7 campuses, eventually extended to 11 faculty and 13 courses. Kick-off meeting held for all campus pilot leads |
| November | The Canvas environment was set up and configured by vendor Training session for campus pilot leads was conducted by Canvas Accounts & test courses were set up for pilot faculty Exploration of course migration by campus pilot leads |
| December | Training and orientation held for pilot faculty Migration of courses experimentation continued for pilot courses Course design assistance offered to pilot faculty as needed |
| January 2013 | Course designed and built by faculty Student account were populated by campus pilot leads Support / Help channels were set up for pilot campuses Courses were all ready on Jan 22 – start of spring semester |
| February – mid-April | Courses delivered in Canvas (Instructors) Weekly meeting with Canvas Implementation support Weekly meeting with campus pilot Leads Regular meeting with Canvas Pilot Faculty Development of project evaluation surveys Consultation session with Nevada on SIS integration Testing on federated ID set up by Middleware, DoIT Survey instruments were designed and input sought |
| Mid April - May | Survey instruments were finalized in mid April Student surveys were conducted end of April (2 weeks) Faculty survey were conducted beginning of May (4 weeks) |
| June | Compilation of students & faculty feedback Final meeting of Campus Leads (June 5) Final Report drafted |
| July 2013 | Final report delivered to Learn@UW EXEC Next step recommendations |

Pilot Project Outcomes

**General Observation of Features, Support needs and Stability**
Since all pilot participants (campus pilot leads, faculty and students) are currently D2L users, it is natural that many draw comparison between the two systems.

There was unanimous agreement that the Canvas system was easy to use. The consistency of the interface across all tools was a huge win. The general concepts of
an LMS were easily translated from the current system to Canvas, even with new terminology and different approaches to the same tasks. Only very small number of helpdesk support tickets (single digit for each campus) was generated during the pilot period across all pilot courses.

The documentation provided by Canvas was basic but helpful, users could usually answer their own questions.

Direct migration of a D2L course to Canvas met with varying degrees of success, depending on the complexity of the course. Challenges lie in restructuring the content area to fit the organization of Canvas. Conversion of discussions and quizzes required similar post-migration cleanups. Migrating a course from Canvas back to D2L failed at the time of this report due to the incompatibility of CC standards adoption between the two systems.

The Canvas system was very stable during the pilot semester. There were almost no noticeable delays or downtime that affected access to the system. One short outage was followed up with clear explanation on cause and remedy. A few users reported delays in files upload occasionally, while others felt uploading big files was very efficient. Canvas communicated upgrades and system maintenance in a timely fashion. As a hosted system, Canvas adopts a continuous update strategy that applies increments of updates and fixes to the system on a regular basis. There was no downtime, and most of the time, users did not notice the changes. This experience was most appreciated by the support staff.

Some positive features are noted: The integrated view approach allows users (both faculty and students) to navigate within the course and across other courses without traversing in and out of each course. This provides real efficiency to managing various tasks across multiple courses, but users need to get accustomed to the view. Collaborative tools (wiki like) are built into the Pages Tool, which is very convenient for group work within the course. Canvas Reports [Appendix 6] provide easily accessible statistics that are of interest to a faculty or course administrator. The small scale of the pilot did not allow assessment on the efficiency and performance implications of these reporting tasks.

Some popular tools such as discussion, quizzes and grade book do not seem to be as feature rich as what our users are accustomed to. The speed grader function is the best liked among pilot faculty, but the sophistication in various types of grade handling was definitely lacking.

While Mobile access was a strong attraction as a pilot feature, users found that the interface and features have lots of room for improvement.

A comparison table of the features available is presented in Appendix 5. This is not an exhaustive study of the two systems, but observations were recorded during the
testing of various tools. The duration of the pilot did not allow enough time for an in
depth investigation to give a fair assessment of all tools.

Authentication
Canvas does not use Shibboleth, the most common SAML2 implementation, but has
developed a custom SAML2 Service Provider to provide this capability. The team
worked with Instructure's technical experts to configure the solution on the Canvas
test environment (wisconsin.test.instructure.com).

Several technical issues were identified in the course of the assessment:

* Canvas's solution doesn’t implement the SAML2 Identity Provider Discovery
  workaround, the team constructed a page containing static links to the appropriate
  URL for each campus IdP configuration.

* Canvas’s discovery implementation initially included a bug that affected ”deep
  links” into the application. The Canvas development team corrected and
  implemented a fix for this issue during the course of the pilot assessment, and the
  pilot team confirmed this was successfully resolved.

* The Canvas configuration interface for SAML2 has a significant bug. If a SAML2
  IdP configuration is deleted and reconfigured, Canvas generates a new different
  URL. This is a fairly common case within UW System, and this behavior could have
  the effect of causing lengthy service disruptions when this scenario presents.

In the overall assessment of the UWS/DoIT IAM support team, the flaws in the
Canvas SAML2 implementation would be significant and present challenges for an
enterprise implementation.

SIS Integration
Regarding SIS integration, notable findings include: Canvas provides APIs, allowing
developers to write custom applications to process SIS data. The APIs provide basic
functionality to add, edit and delete courses, users, and enrollments.

Additional functionality allowing Site Administrator’s local changes to override SIS
updates and combine sections is also included; however, it is not clear that the
functionality needed to meet all critical UWS business rules is available.

Nevada System of Higher Education was able to develop applications utilizing the
Canvas APIs to integrate with their SIS, but does not have business rules as complex
as those of UWS. If we decided to pursue SIS integration with Canvas, we would
need to do much more investigation.
**Student Feedback**²

Pilot faculty monitored student reactions and feedback throughout the semester. The overall impression was that students do not have any major issues in adapting to the new system. The very few helpdesk tickets generated during the semester and the similar completion rate of the courses compared to other semesters are good evidence. Other than some minor web browser compatibility issues, students seem to be comfortable with using the system throughout the semester.

An online survey was administered at the end of the Spring 2013 semester to all students across 13 pilot courses. 179 students completed the survey, representing a 68.6% response rate.

Essentially, majority (72%) of the students in the pilot were very familiar with the D2L system. 47% are senior level upperclassmen. We were not able to get any freshmen level course to participate in the pilot. The courses represent disciplines in Education, Business, Library Science, Social Science and Humanities. 53% confirmed that they do not have any technical issues in using Canvas, even though over 83% admitted they could use more training.

When asked if they have a choice, with all other factors being equal, 47.9% of respondents chose Canvas, 36.1% favors D2L and 16% were indifferent.

Canvas has touted its user interface design meets the communication and interaction styles of modern day social media adept learners. However, the responses indicate that student only perceived marginal differences when compared to other LMSs that they use.

Overall, students express a moderately favorable reception to the Canvas LMS. The survey results validates once again that students can easily be adaptable to a new system. They appreciate good training. They reiterated as in an earlier student survey (2012) that the LMS is an important part of their learning experience and they prefer to use one LMS versus multiple LMSs.

**Faculty Feedback**³

The questions and problems encountered were minimal during the pilot. This can be attributed to the LMS experience of this selected group of faculty and the useful documentation provided. No campus created its own documentation for the pilot. Most notable questions were related to the use of discussion forum, mobile apps limitation and grade book.

---

² The Student Survey instrument and more detailed results are available to the Learn@UW Exec Committee and can be available to others upon request.
³ The Faculty Survey instrument is available to Learn@UW Exec Committee and can be available upon request.
At the end of pilot, more comprehensive feedback was collected from each faculty through a survey with open-ended questions. We received 100% participation from all 11 faculty. 80% of the participating faculty indicated a positive experience with the system. 90% recommended extending the pilot for a full exploration of the system, and that they are willing to teach the same course in Canvas again. Approximately 50% of faculty wished for more in-depth training on features.

Faculty pointed out many good features in Canvas. Among those are:
Easy and intuitive navigation, less icons and less clicks, flexible and integration among tools such as assignments, discussion, grading. The calendar and notification features serve as helpful reminders. Collaboration tools such as group pages (wikis) makes group work is easy to set up. The most favored feature is the Speed Grader, which allows faculty to easily handle multiple grade items, sort, and attach comments. Faculty also like the internal email system that keeps course email separate from an external campus email system.

Some noted that file upload seem to be slower, and required refreshing screens. Some did not like the HTML editor, but the Math equation editor (using LaTeX) is a far superior tool they have experienced in an LMS. Many did not like the Announcement feature because of the less prominent placement. The integrated view design makes the system less course centric. However, it can run into problems if files are not named intuitively, e.g. “Homework 1” in multiple courses can appear in the Upcoming Assignment and calendar views that can cause confusion.

In general, the pilot faculty thinks the system has a lot of potential. More time to experiment and in-depth training would allow instructors to discover and better deploy the tools as intended. They want to take advantage of the tools but not necessarily changing the pedagogy best fitting to the course.

**Campus Pilot Leads**
The campus pilot leads represented the learning technology support units on seven campuses. They helped to recommend the faculty for the pilot project and they assumed main support role during the spring semester. They shared their LMS expertise by assisting in testing the features and system administration efficacy. This group met weekly to share their findings, and collaborated in solving issues that arose. A final debriefing meeting was held at UW-Eau Claire early June on the pilot experience.

The group was impressed with the ease of use and ease of transition for the pilot courses into Canvas. They agreed on the quality of the user documentation, especially on the sample courses made available by Canvas that brought better understanding to the tools. They agreed that performance was a non-issue during this small-scale pilot, and the continuous upgrade strategy worked very smoothly for the users.
The group was in agreement with the faculty on the positive features offered by Canvas. In addition, they observed that LTI integration, when available from the 3rd party vendor, was very easy to set up. Within the duration of the spring semester, we were able to set up integration with Blackboard Collaborate, Turnitin, Courseload, and Tegrity all with minimal efforts.

A number of important tools such as the Grade book, Quizzes and Discussion are not as feature rich as our current LMS. However, the essential features can serve majority of the users and a simple clean interface can be a plus.

While Canvas is easy to use, they also feel that they need more training and time to explore the potential of features currently more obscure and not used by pilot faculty. Faculty will definitely need more than one semester to be creative in the environment.

They would like to know more about the SIS integration, such as administration of course mapping and creation tasks, student enrollment and grade transfer possibility back to the SIS, an aspect of critical importance to the success of a system.
Conclusion and Recommendations

The LMS Task Force in their 2011 study identified Instructure Canvas as an interesting and viable new comer in the Learning Management Systems space that may closely address the LMS needs of UWS.

"Specifically, the LMS task force identified Canvas as having several positive features, including a lean modern interface, good organization and design across courses, ease-of-use with few clicks to accomplish tasks, drag and drop function, efficient notification and calendar functions, modern hosting back-end technology- Amazon Cloud service (which instills more confidence than some other cloud options), and the claim of no downtime for updates. The system holds a lot of potential while certain key elements that are required to support enterprise of the size and complexity like UWS need to be carefully examined. These include back-end integration with SIS, integration with other third party products, scalability, general design, and the robustness of its quizzing & grade book capabilities."[^4]

This pilot project provided us additional insights on features offered and the actual experience from faculty and students. While the overall feedback substantiated the finding on the LMS Report, and the experience are generally positive, we do not observe any extraordinary desire to embrace the product. This can be attributed to the following factors: Users are generally satisfied with the current system, they (faculty especially) did not have enough time to uncover in depth the system to use it differently than their current practice. There is a resounding recommendation from the pilot faculty and campus pilot leads that additional or expanded engagement will give us more accurate assessment, it will be worthwhile to get a deeper understanding of the system, especially on Integration and SAML authentication capabilities.

Additional insights were gained through the students’ feedback. Canvas seems to be preferred among individual working 40 hours a week or more. Does that mean that different LMS may appeal to different student groups with different lifestyles and commitments? [Appendix 4]

It will also be interesting to investigate further the differences between a feature that was deemed unimportant by students and also not used a lot. Was the feature not available, difficult to use, or some other reasons? Are these findings different in different LMS? [Appendix 4 – page 25]

There are various options to gain better understanding of LMS needs to prepare for a future RFP exercise. Any project will require competing resources and expertise from the same constituency groups – the Learning Technology units and the LMS site administrators, faculty and students.

**Recommendations**

Following are a few actions the campus pilot leads suggested UWS to pursue at a System level so we are better informed before the future RFP process. Executing these activities will be dependent on staff and funding resources available and the timing of the next RFP process.

<table>
<thead>
<tr>
<th>Action</th>
<th>Resources Needed</th>
<th>Strategic Outcome</th>
</tr>
</thead>
<tbody>
<tr>
<td>Continue with the Canvas Pilot – Expand on breadth and depth of usage for 2013-14</td>
<td>Contract with Canvas Training for Users and Campus support Properly defined pilot goals – e.g. better understanding of integration, Mobile access, ePortfolio, site-admin tasks</td>
<td>We will not lose the expertise gained during the spring semester. We will be better informed of viability of an alternative system</td>
</tr>
<tr>
<td>Conduct a Faculty Needs Survey on LMS (last satisfaction survey was conducted in 2010)</td>
<td>A committee to design and conduct the survey Seek expert engagement to analyze the data</td>
<td>To understand needs and satisfaction level of the instructors on the current LMS. To gain insights from newer faculty who may have come from other LMS environments</td>
</tr>
<tr>
<td>Explore other LMS systems</td>
<td>A team to identify the LMSs to pursue Assemble a group of experts to test out the systems</td>
<td>Compare the information already published to see how well they apply to our environment</td>
</tr>
<tr>
<td>Conduct a Faculty shoot-out event – involve faculty to gather and test (or design a course) within a time frame (one or two days) using different LMS system</td>
<td>Need availability of test accounts Need support people to be knowledgeable on certain systems – or offer training ahead Need willing faculty participation (stipend) Need experts in conducting the exercise, observe and assess the outcome</td>
<td>Gain a good understanding of the LMS possibility, and will be a complement to the item above</td>
</tr>

Appendix 3 - Canvas Pilot Description & RFP

UWS Pilot Project on Instructure/Canvas Technology
Sponsored by UWS Learn@UW Executive Committee

Introduction

Within the University of Wisconsin System (UWS), the Learning Management System (LMS) is a key technology in delivering digital resources and providing interaction in traditional face-to-face, hybrid/blended or totally online courses. UWS has standardized a single LMS for the last nine years for efficiency in cost and support. The annual growth on adoption has been steady, feedback from faculty and students indicate general satisfaction in the product and support.

The LMS landscape has evolved dramatically the past two years. New vendors in the market offer features that may fit certain needs of our academic community. The UWS needs to stay informed and to provide opportunities for experimentation and exploration on emerging technologies that can affect teaching and learning. The Learn@UW Exec Committee has chosen to endorse a pilot project to investigate how new products in the LMS space compare to our current system. Based on the recommendation of the LMS Exploratory Task Force, the first proposed pilot will be on Instructure/Canvas.

Purpose of pilot

The purpose of the pilot is NOT to replace the current LMS, Desire2Learn. UW campuses have reflected high satisfaction rates with their current LMS. The main goal of the Canvas pilot is to understand the functionality provided by this LMS and its impact on student engagement and learning that may not be available in the current LMS system. Specifically, the pilot looks to examine whether features offered by Canvas meet instructors’ pedagogical and students’ learning needs, helps instructors and student stay organized and manage their courses, is easy to use, encourages continued use, and increases overall satisfaction with the technology. The pilot will examine the resources necessary to support the technology and its users at a campus and System level. The pilot will explore the technical infrastructure of the system and how it meets the authentication and SIS requirements. Finally, organization administration and costs considerations will be evaluated.

Why Canvas?

Canvas is a relatively new LMS system that has gained a lot of attention and adoption in the higher education market the past 18 months.

Specifically, the LMS task force identified Canvas as having several positive features, including a lean modern interface, good organization and design across courses, ease-of-use with few clicks to accomplish tasks, drag and drop function, efficient notification and calendar functions, modern hosting back-end technology- Amazon Cloud service (which instills more confidence than some other cloud options), and the claim of no downtime for updates. The system holds a lot of potential while certain key elements that are required to support enterprise of the size and complexity like UWS need to be carefully examined. These include back-end integration with SIS, integration with other third party products, scalability, general design, and the robustness of its quizzing & grade book capabilities.

Main Goals of this pilot phase include:

- What functionalities does Canvas provide that D2L does not?
- What functionalities does D2L provides that Canvas does not?
- What student support efforts are needed from instructors? campus?
- What resources are needed to support the technology and users?

Secondary goals of the pilot:

- How does Canvas impact instructor and student satisfaction (including training and support, ease of use, validity and reliability of technology, overall satisfaction)?

16
• How does Canvas impact student engagement and learning?
• What efforts are needed and opportunities availed for faculty development?
• What technical infrastructure is needed to effectively support a UW-System instance of Canvas?

Participation

All interested UWS campuses are invited to participate. However, due to the limited capacity of the pilot project, only a small number of courses and a few campuses will be selected to participate.

Interested campuses need to assign a pilot manager as the main contact. We are expecting this will be the campus LTDC-representative or his/her designate. We recommend that an instructor is selected /invited by the LTDC because of the limited scope and size of the pilot. The campus pilot manager will submit a short RFP (see below) with their instructor.

Proposals will be evaluated by the following criteria:
• Institutional readiness to support such a pilot - this includes available resources to coordinate and support instructors and students, to provide orientation and training, and to develop and provide support documentation and materials. Each campus will 1-2 courses. Canvas will provide ‘premium level’ training and support during the pilot.
• Instructor with interest in exploring LMS functionalities – We are seeking instructors with experience using the current LMS. We will also consider a non-LMS user but willing to try a new LMS.
• Course candidates - Courses will be selected to represent a variety of disciplines, class sizes, and different pedagogical strategies. The diversity will allow for testing many features of the LMS.

The UWS Office of Learning Technology Development (Lorna Wong) and the Learn@UW Exec Committee will form a small Review Committee to ensure a combination of courses and campuses are selected to best accomplish the goals of the pilot.

Selected campuses will be notified no later than Nov 1, 2012, and will assist in planning of the pilot project in terms of training, communication, course design, and evaluation. Courses will be delivered Spring 2013 semester. Upon completion of their participation in the pilot, the campus LTC & instructors will receive a stipend. Details are outlined on the RFP.

Evaluation of Pilot Outcome

Pilot campus project lead and faculty will participate in the evaluation of this project. We will also seek researchers with experience in quantitative and qualitative methodologies and in usability testing who have interest in this project to lead the evaluation.

The results of the evaluation will determine the success of the pilot and the next steps of action. A small stipend will be awarded to the evaluation team to lead the work.

What do we want to evaluate:
• What functionalities does Canvas provide that D2L does not?
• What functionalities does D2L provide that Canvas does not?
• How does Canvas impact instructor and student satisfaction (including training and support, ease of use, validity and reliability of technology, overall satisfaction)?
• What efforts are needed for faculty development from LTC units?
• What student support efforts are needed from instructors?
• What resources are needed to support the technology and users?
• How does Canvas impact student engagement and learning?
• What technical infrastructure is needed to effectively support a UW-System instance of Canvas?

Evaluation Methods:
The evaluate strategy may include multiple methodological approaches through experiential evaluation, surveys, direct observations, and focus groups.
• Surveys over the course of the pilot to collect a cross-sectional body of the participant’s experience
• Faculty and student focus groups to assess the strengths and weaknesses of the product
• Reports/observations of faculty and instructional support staff during course development to gain a deeper understanding of the ability to meet instructors needs, satisfaction with the product, and resources to support instructors and the technology
• Reports/observations in testing functionality and technical infrastructure needs

Tentative Timeline (subject to revision)

September 2012
- Contact Campus LTC for possible campus interest (Lorna Wong)
- Negotiate with Instructure for a Canvas pilot agreement (Lorna Wong)
- Review Project Plan with Learn@UW Exec Committee (Bob Hoar, Tanya Joosten, Lorna Wong)

October 2012
- RFP distributed - week of Oct 8
- Finalize Pilot terms with vendor – before November
- RFP deadline – Oct 22
- Review RFP and identify campus participants (Pilot Review Committee) – Oct 22-26
- Announcement of Pilot campuses and courses – Week of Oct 29
- Set up pilot environment and get access to Canvas environment - before end of October
- Pilot campuses/instructors kick-off meeting – Week of Oct 29-Nov 2

November 2012
- Training, course migration, documentation– week of Nov 1-15 (Campus Pilot Leads)
- Create test course sites for participants (UWS/ Canvas)
- Test course migration from current LMS (Campus Pilot Leads, Canvas support)
- Set up communication mechanism for project participants (Campus Pilot Leads)

December - January 2012
- Orientation and training for instructors (Canvas/ Campus Pilot Leads)
- Start design course sites for spring courses (Instructor participants)
- Continuous consultation and support provided to instructors (Campus Pilot Leads)
- Enrollment of students (Canvas, Campus Pilot Leads)

January 2012
- Delivery of courses utilizing Canvas (Instructors) for Spring 2013
- Begin development of project assessment and evaluation tools (Campus Pilot Leads /Evaluation Team)

April 2012
- Assessment and evaluation tools completed (Evaluation team)
- IRB approval if needed (Evaluation team)

May 2012
- Collect data on instructor and student use of Canvas (Evaluation team)
- Instructor debriefing/focus group on use of Canvas (Evaluation team)
- LTC (Pilot project lead) debriefing/focus group on the use of Canvas (Evaluation team)

June/July 2012
- Complete analysis of data gathered from faculty and students (Evaluation team)
- Complete final report to Learn@UW Exec Committee (Evaluation team and Pilot Review Team)
Budget – Supported by the Academic Systems CSRG

Resources

http://www.instructure.com/
Canvas Guides - provide a variety of resources for them to review.
Canvas Orientation Courses and Demo - The Demo is 90 minutes long but allow you to learn and understand Canvas.
Overview

The University of Wisconsin System is conducting a pilot project as an effort to enhance our understanding of the changing LMS landscape. The intent of the LMS pilot is NOT to replace our current standard system – Desire2Learn. This pilot provides opportunities for experimentation and exploration on emerging technologies that can affect teaching and learning. Instructure/Canvas is the technology chosen for Spring 2013. Other products will also be considered in the future.

We invite interested campuses to select faculty and teaching staff to participate in this project where they will design a course using Canvas to be delivered for the spring semester 2013.

The Campus LTC is expected to assign a designated staff to be the campus pilot project lead to support the pilot instructor. Participating pilot instructor and campus LTC will each be awarded a stipend of $1000 upon completion of the project.

Pilot campus Lead (LTDC-rep or designate) will be expected to:

• Attend Training workshops offered by Canvas
• Act as the contact person to the UWS project implementation manager
• Support the pilot faculty – training, course set up, course migration, student enrollment and continuing support during the semester to ensure smooth delivery
• Participate in evaluation efforts during and after the pilot
• Support the transfer of the course back to the current supported LMS after the pilot as needed

Pilot instructors will be expected to:

• Attend consultation meetings and training workshops in using Canvas
• Understand that the pilot course will not be integrated with the campus SIS. Enrollment of students and transfer of grades back to the SIS will be needed.
• Integrate Canvas into their course for delivery in Spring 2013
• Assist with the evaluation of the Canvas platform on instructors and students, including surveys, focus groups, and written narratives, and
• Share their experience at future UWS LMS discussions

Application

Please submit a 1-2 page proposal by October 22, 2012, to Lorna Wong [lwong@uwsa.edu]. Your proposal should address all the questions in the RFP template below. The selection of participants will be competitive. Awards will be announced October 26, 2012.

Instructure Canvas RFP template

Campus Information
Campus:________________________

Contact Information
Campus LTDC Representative:________________________
Campus Pilot Lead (if not LTDC-rep):________________________
Contact Email of Pilot Lead:________________________
Campus LTC unit will be available to support faculty & students in this pilot: Yes  No

Faculty Name: _______________  Email: _______________
Campus Mailing Address: _______________________________________
College/Department: _______________________________________

Course Information [course must be delivered for Spring 2013]

Proposed Course Title: ________________________________
Course Enrollment Size and Level: ______________________
Course Delivery Mode: F2F  blended  Online
LMS Tools will be used in this course ______________________
Other Technologies Used in the course (e.g. turnitin, lecture capture, BB-Collaborate, Kaltura, blogs, wikis):
__________________________________________________________________________________________
__________________________________________________________________________________________

Faculty Experience in using LMS & Technology

Experience with using technology or LMS in your teaching (courses taught using LMS, Years, tools used etc.)
__________________________________________________________________________________________
__________________________________________________________________________________________

Number of years / semester you have taught this course: __________

Briefly address:
• Why do you want to pilot Canvas in your course?
• Why are you a good candidate to participate in this pilot?
• What do you expect Canvas to offer that will better facilitate your course? e.g. efficiency, student engagement, interaction, performance, etc.
• Why is your course suitable for better understanding of the potential and limitations of Canvas?
• Any other information
Appendix 4 – Student and Faculty Survey Analysis

UW System Canvas Pilot: Student & Faculty Attitudes, Opinions and Usage

SURVEY FINDINGS

Joshua H. Morrill, PhD
Evaluator, Academic Technology
DoIT – University of Wisconsin Madison

June 2013

Background

OBJECTIVE:
The purpose of this research is to help the University of Wisconsin system understand any unique benefits or issues associated with adopting Canvas as an LMS.

METHOD/APPROACH:
An online survey was administered at the end of the Spring 2013 semester to 261 students across 11 institutions. 179 students completed the survey.

This is a 68.6% response rate... And is quite good for a distributed survey like this.

In addition to the student survey a short, open-ended follow up survey was sent to the 11 faculty members who participated in this pilot. As of the writing of this report 10 of the 11 faculty members have completed this online survey. A few highlights of that interview are presented in this report.

The approach taken in compiling this report was to provide the key pieces of data that will inform a decision, highlight differences/uniqueness, or inform action moving forward.
Initial Findings

OVERALL:
Responses to Canvas among UW-System students is more moderate than the initial test done at the UW Madison School of Business. This could be because students were not exposed to the breadth of functionality within Canvas. It is recommended that there is a more formal training for faculty and student participants to see if this increases perceptions.

OTHER CONSIDERATIONS:
It may be worthwhile for the system to conduct some usability tests among a few LMSs with system students. The reason for this recommendation is the finding that older students seemed to appreciate Canvas more than younger students. What we do not have a good sense of is “Why”? What is appreciated by older students and what functionality do younger students want that is missing?

Training emerged as a significant theme in faculty and student responses. Going forward a comprehensive set of training materials should be developed. And, this is likely a good idea regardless of the LMS.

Overall, faculty seemed to like Canvas even though they had a few concerns. Likewise, students were generally favorable (though less so than the UW Madison evaluations). However, it is important to note that similar to UW-Madison students, system students wanted one LMS. This is important for any institution to consider. Multiple LMSs on a campus would be perceived unfavorably by students.

RECOMMENDATION:
A second year of testing with willing campuses. However, augment this test with robust support and training materials for faculty and students. This will allow you to see if understanding functionality raises value of Canvas in eyes of students.
Quick Profile of Respondents

Familiarity with Desire 2 Learn (D2L)

- I am very familiar with Desire 2 Learn (D2L) 71.8%
- I am moderately familiar with Desire 2 Learn (D2L) 26.6%
- I am not at all familiar with Desire 2 Learn (D2L) 1.1%
- I am slightly familiar with Desire 2 Learn (D2L) 0.6%

YEAR IN SCHOOL
- Freshman: 15.7%
- Sophomore: 3.0%
- Junior: 10.2%
- Senior: 18.1%
- Graduate: 47.0%
- Other: 3.0%

EXPECTED CLASS GRADE
- A: 49%
- AB: 30%
- B: 11%
- BC: 5%
- C: 2%
- D: 1%
- F: 1%

CURRENT / INTENDED MAJOR (Top 5)
- Education: 19%
- Business: 12%
- Library Science: 11%
- Social Science: 10%
- Humanities: 6%

PROBLEMS & PERCEPTIONS
- 53% had NO technical problems using Canvas.
- 83% Agree or Strongly Agree that the LMS used in class (Canvas) was an important part of the course.

Report Topics

- If Given the Choice: D2L vs. Canvas
- Feature Importance and NON-Importance
- Faculty Member’s Thoughts
47.9% of surveyed students would select a course teaching canvas (all other factors being equal). But, more training on the Canvas and its capabilities could raise this number significantly. A disproportionate amount of students opting for the D2L course felt like they needed more training on Canvas.

Q: Imagine you had to select between two identical courses. The only difference is that one instructor uses Desire2Learn (D2L) and in the other they use Canvas. Which course would you choose?

Canvas seems to have a slight edge in elements relating to increased interaction. However, for most attributes students see no difference with other LMSs.
**Importance / Use / and Problems with Canvas features.** There are three tiers of features (1 - red) No experience: did not see value in and did not use, (2- yellow) Hit or Miss: some perceptions of not being important, but also a percentage who used without problems, and (3- green) Core: High usage / nearly universal perceptions of importance of feature.

<table>

</tbody>
</table>

**Initial Faculty Feedback**

While the overall impressions appear positive, the need for training on Canvas was highlighted. Additionally, many comments suggested that D2L did many communication tasks faster and more effectively than Canvas.

**Positive or Negative experience?**

- “80% of participating faculty indicated the experience of piloting Canvas was positive.

**Recommendation**

- 90% of participating faculty would recommend extending the pilot to the Fall semester for further exploration.

**D2L Better than Canvas At...**

- Many communication, process issues were raised as strengths of D2L:
  - "D2L slightly faster in posting and refreshing pages"
  - "The HTML editor in D2L is MUCH more friendly.
  - "Course Notes much easier to recognize than Announcements."
  - "I do like the quizzes feature a little better in D2L"
Miscellaneous Canvas Feedback Facts

- **Canvas seems to be preferred among individuals working 40 hours a week or more (see below).** Does this indicate an important group to consider?

<table>
<thead>
<tr>
<th>Percent of Individuals</th>
<th>within each working group who indicated that they would DEFINITELY choose a Canvas course.</th>
</tr>

</tr>
<tr>
<td>1-15 hours per week</td>
<td>23.1%</td>
</tr>
<tr>
<td>Not employed</td>
<td>23.3%</td>
</tr>
</tbody>
</table>

- Most students indicated Chrome as their preferred browser (48.5%). However, students who used Safari experienced the fewest problems (26.3% experienced a problem), followed by Internet Explorer (41.7% experienced a problem). 50% of Chrome users and 55.2% of Firefox users reported experiencing a problem in Canvas. Are there some browser specific issues that need to be addressed?

Initial Findings

**OVERALL:**

Responses to Canvas among UW-System students is more moderate than the initial test done at the UW Madison School of Business. This could be because students were not exposed to the breadth of functionality within Canvas. It is recommended that there is a more formal training for faculty and student participants to see if this increases perceptions.

**OTHER CONSIDERATIONS:**

It may be worthwhile for the system to conduct some usability tests among a few LMSs with system students. The reason for this recommendation is the finding that older students seemed to appreciate Canvas more than younger students. What we do not have a good sense of is 'Why'? What is appreciated by older students and what functionality do younger students want that is missing?

Training emerged as a significant theme in faculty and student responses. Going forward a comprehensive set of training materials should be developed. And, this is likely a good idea regardless of the LMS.

Overall, faculty seemed to like Canvas even though they had a few concerns. Likewise, students were generally favorable (though less so than the UW Madison evaluation). However, it is important to note that similar to UW-Madison students, system students wanted one LMS. This is important for any institution to consider. Multiple LMSs on a campus would be perceived unfavorably by students.

**RECOMMENDATION:**

A second year of testing with willing campuses. However, augment this test with robust support and training materials for faculty and students. This will allow you to see if understanding functionality raises value of Canvas in eyes of students.
Appendix 5 – Feature Comparison Table

The following table was prepared by UW-Stout during their testing of the Canvas features. It offers a brief comparison of the key features between D2L (v10.0) and the current version of Canvas during Spring 2013 semester. It is not intended to be a comprehensive listing of all features and tools both systems.

**Activity by Date**
Each bar represents the number of page views on that day. An orange bar indicates that some user took an action within a course on that day.

**Activity by Category**
Each bar represents the number of page views related to that category.

**Grade Distribution**
Distribution of current grades in courses across all students enrolled in department courses.

- Activity by date (page views in blue and user “took an action” in orange)
- Activity by category (assignments, discussions, general, modules, grades, etc.)
- Grade distribution
View courses enrolled in, groups, contact info, page views with and without participation with date and browser used

From sub-org level (Campus): same as Org level
**Course-level analytics**

**Activity**
- Chart bar represents the number of page views on that day. An orange bar indicates that some user took an action within the course on that day.

**Assignments**
- Each bar in an assignment. The green bar represents the percentage of students that completed the assignment on time. Assignments that are late are yellow, and missing assignments are red.

**Grades**
- Chart bar in an assignment. The 50th percentile (blue) indicates the lowest score for any student in the course in the highest score. The 75th percentile (green) indicates the 75th percentile for the 75th percentile in the 75th percentile.

</table>

**“View Course Analytics” from course “Home”**

- Activity by date (page views in blue and user “took an action” in orange)
- Individual course assignments and graph showing how many on time, late, or missing
- Grade distribution for each assignment
- Table of student names with individual Page Views, Participations, Assignments broken down similar to class assignment table, and Current Score (clicking on student names leads to further breakdown of categories by date, score, etc. – same info in People->View Analytics for individual)
**Course-level user stats**

View user information from “People” within course, click on People then click on username – same info available when clicking on user’s name from individual user analytics

- View recent messages and contact info for individuals
• “Analytics” link goes to previously mentioned individual analytics
• “Grades” link jumps over to gradebook view of individual
• “Access Report” link shows content items, # of views, times participated, and last viewed
“User Account Details” link shows same info as system and campus level

**Student interaction Reporting – for instructors**
(From global/top menu) Grades->Student Interaction Report next to course being taught
• Table of student names with “last interaction” date, current course score, final course score, and assignments they each student submitted that need to be graded

**Student Competency Reporting and Grade Export Report**
Run from Org or Sub-Org level, from “Settings” choose “Reports” tab
• Competency shows the learning outcome results for all students. The resulting CSV file will have one row per user-outcome-result pair, and will show the details of the result including the associated assignment
Report paths glossary

**Student Competency:** Account > Settings > Reports

**Statistics:** Account > Statistics

**User Page Views:** Account > Users > [User]

**Account Outcome Results for [User]:** Account > Users > [User] > See Outcome Results for [User]

**Account Outcomes - Aligned Items:** Account > Outcomes > [Outcome]

**Account Outcomes - Outcome Artifacts:** Account > Outcomes > [Outcome]

**Course Outcome Results for [User]:** Course > Users > [User] > See Outcome Results for [User]

**Course Outcomes - Aligned Items:** Course > Outcomes > [Outcome]

**Course Outcomes - Outcome Artifacts:** Course > Outcomes > [Outcome]

**Quiz Results:** Course > Quizzes > [Quiz] > Show Student Quiz Results (from Options [“Gear”] drop-down menu)

**Student Progress for Modules:** Course > Modules > View (Student) Progress

**Course Statistics - Totals, Discussions, Assignments, Students, Quizzes:** Course > Settings > Course Statistics
