

# Respondus/Turnitin: Faculty Perspectives

**Monday, February 17, 2020**

**12:00 – 12:50 p.m.**

**Hickory Room, Student Center**

**Panelist: Sylvia Beyer, Fabrice Conte-**

**Williamson, Meredith McGinley,**

**John Navarro**

The Respondus and Turnitin products have been in use for two academic years. Respondus offers two functions; (i) it monitors students during a test taking event using the student's webcam and (ii) the student's web browser is "locked down" so students cannot access digital resources.

Turnitin provides a plagiarism checking of student submissions; results can be viewed only by the instructor or given to students for self-checking purposes.

At this session the faculty panel will discuss their experiences using these tools. They will identify strengths and weaknesses and provide examples of how the product was utilized in their course(s). They will also share their impression of the student perspective.

Survey data revealed that all who participated intend to keep using Turnitin, but the results were varied for Respondus. A summary of this data will be provided.

Light Refreshments will be served.

This session is sponsored by the Teaching & Learning Center and Innovations in Learning
