Human Resources
Mosswood Institute
Kenosha, WI 53158

Dear Mosswood Institute Hiring Team,

As a researcher, I take pride in conducting efficient and proper field research, which reflects in my dedication to laboratory and field sample analyses. As a Research Assistant at the Mosswood Institute for Life Sciences, I intend to maintain my dedication to laboratory work to produce data for the institute's research. After discovering this role on Indeed, I am certain that my command over laboratory and field research techniques defines me as an invaluable resource for the institute to reach its current research goals. Specifically, my experience with gathering data in unusual environments and my ability to maintain accurate documentation of data establishes my abilities as vital to the institute's research project.

Mosswood Institute is looking for a versatile research assistant who can thrive and collect data in unusual environments, and my participation in the Desert Arachnid Genome Project (DAGP) situates me as the ideal candidate. The DAGP relies on my collection of data in the Atacama Desert in northern Chile. During this project, I was asked to gather the silk of an elusive species of spider that is native to the region—a region known for its extreme temperatures. To properly collect the data, my research team and I developed special frames for carefully harvesting the spider's silk. My ability to thrive and collect data in an extreme environment demonstrates my capacity for operating as a research assistant in unusual environments.

Mosswood Institute holds a strong reputation for quality and accuracy and therefore expects proper data documentation. My experience maintaining accurate documentation of data under extreme circumstances indicates my aptitude for the role. While working on the DAGP, my research team and I were unable to access the virtual cloud where we usually store and organize our data. I developed a system for the team to log and accurately track our data offline and then upload all records once a secure cloud connection was reestablished.

No matter the circumstances, I am a resilient and dedicated researcher who prioritizes accurate data documentation, and I am confident that my skillset brings value to Mosswood Institute. I look forward to further discussing my compatibility with this role.

Best regards,

Natalie Natural
